

Todd S. Jonas

Senior Vice President, Operations

Todd S. Jonas is Senior Vice President, Operations for Tenaska Generation, which includes eight natural gas plants, two wind farms and two solar facilities. He is a member of Tenaska's Executive Leadership Board, is involved in strategic planning activities and serves on various Tenaska management committees.

Mr. Jonas is responsible for the day-to-day operations, maintenance and compliance activities for Tenaska's entire fleet of plants and oversees corporate operations and all employees of plants operated by affiliates of Tenaska. His responsibilities for the fleet include production and outage management; environmental, health and safety; operations and maintenance (O&M) technical support services; North American Electric Reliability Corporation Reliability Standards implementation and compliance; and budgeting, contract administration and human resources support for the plant staff.

Mr. Jonas' responsibilities for each domestic project include value creation for Tenaska and its investors through cost control and improved plant performance. He has also helped manage efforts to transition projects into merchant operation following the end of the long-term off-take agreements.

Mr. Jonas joined Tenaska in 1998 and was a member of the engineering team that designed, constructed and commissioned Tenaska's Frontier Generating Station near Shiro, Texas, which was one of the first plants capable of dispatching power to multiple grids. Once Tenaska began self-operating its projects in 1999, his responsibilities included coordinating the pre-commercial operations and O&M efforts for new plant construction and providing asset management after commercial operation.

Before joining Tenaska, Mr. Jonas was the leader of Black and Veatch Corporations' O&M Support Services Group and served as Plant Engineer for a Basin Electric Power Cooperative power plant.

Mr. Jonas holds a Bachelor of Science degree in mechanical engineering from North Dakota State University in Fargo.
