

Providing Energy Management Services since 1997

Tenaska Power Services Co. is an experienced power marketer that offers utilities, municipalities, large industrial clients and independent power producers a variety of optimization services, energy management, power trading and settlement services.

History

Tenaska Power Services Co. (TPS) is a wholly owned subsidiary of Tenaska, a privately held energy company headquartered in Omaha, Nebraska, with offices in Dallas, Denver, Houston, Pittsburgh, Philadelphia, Boston, and Calgary and Vancouver, Canada. Tenaska was founded in 1987 and is consistently ranked by *Forbes* magazine among the largest privately held companies in the United States.

Established in 1997, TPS is a leading energy manager in the U.S., providing a robust range of services to generation and demand-side customers across AESO, CAISO, ERCOT, IESO, ISO-NE, MISO, NYISO, PJM, SERC, SPP and WECC. TPS is also a leading provider of services to the renewables industry.

Philosophy

TPS is a relationship-driven energy marketing company focused on bringing incremental value to our customers through attention to detail, an acute understanding of market dynamics and in-depth knowledge of currency and proposed market rules.

Services

As an experienced power marketer, TPS offers customers a variety of services, including:

- Optimization Services
- Energy Management
- Power Trading
- Settlement Services

TPS provides a wide range of services to various customer types, including:

- Independent Power Producer
- Renewable & Storage Developer/Owner
- Private Equity
- Investor-Owned Utility
- Municipal, Cooperative & Water Authority
- Commercial & Industrial
- Community Choice Aggregator & Joint Action Agency
- Retail Supplier

24/7 Real-Time Energy

Management Services Desk

TPS utilizes a 24/7 Real Time Energy Management Services Desk, allowing TPS to manage energy storage resources and peaking facilities and to monitor market conditions, seeking opportunities to capture additional revenue for its customers.

RTO Interface

Proprietary systems help TPS customers submit data, retrieve information and communicate with markets in a one-stop format.

Optimization

TPS staff relies on years of experience, relationships and understanding of market fundamentals to maximize revenues for customers.

24-Hour Support

TPS maintains a state-of-the-art EMS/SCADA system and 24-hour trading desk, as well as a 24-hour operations desk.

Settlements

TPS has developed a proprietary data management and calculation engine, PowerTools Platform[®], which is capable of invoice reconciliation, predictive/shadow settlements, custom reports, billing and dispute tracking.

ORIGEN™

Creative Solutions & Tools

TPS utilizes ORIGEN™ for energy storage management and optimization. ORIGEN forecasts the energy and ancillary service market offers for stand-alone storage and hybrid resources like combined solar and storage.

ORIGEN helps customers maximize the revenue of energy storage while managing within complex operational requirements. Renewable energy sources like wind and solar are intermittent by nature and have the potential to drive significant fluctuations in supply and pricing.

As renewable energy pushed and reshaped the energy industry, TPS continued to build on a year-old initiative – Renewable Energy Advisory Services – leveraging its reputation as the largest provider of energy management services for renewable resources, including wind, solar and storage. Customers view TPS as a trusted advisor in the

renewable industry, able to assist in creating and managing complex renewable hedge solutions that achieve their strategic business and environmental objectives.

TPS has set a new industry standard for energy management and settlement services with the development of its proprietary data management and calculation engine – PowerTools Platform® (PTP). PTP is a business user-configurable software for building applications that model business objects to represent customer configurations and portfolios. The application of the objects is highly flexible to quickly adapt to changes. PTP processes massive amounts of data and equations for these objects in a matter of seconds, while providing a complete audit trail of all calculations, versioning and changes.

Our People

Based near Dallas, the TPS staff includes 200 professionals. Our people and their dedication to long-term relationships are our greatest asset. Our extensive experience, in-depth market expertise and focus on creating value for our customers makes our energy management services second to none.

Tenaska Power Services Co. professionals have a solid reputation for integrity, experience, extensive market knowledge and customer focus.
